🧩 ABOUT ME

DevSecOps Engineer with 3+ years of experience building and operating cloud-native platforms using Kubernetes, Terraform, AWS, GitLab CI/CD, and Linux. Experienced in automation, infrastructure as code, observability, and backend development. Interested in MLOps and production machine learning systems.

🎓 EDUCATION

Computer Science
UNIVERSIDAD MIGUEL HERNÁNDEZ
2024

🧰 EXPERIENCE

SWISSCOM

DevSecOps

09/2024 – Present | Bern, Switzerland

- Designed and maintained Infrastructure as a Service (IaaS) using Terraform to provision and manage cloud resources in a controlled, reusable manner
- Managed application deployment on Kubernetes, including configuration, packaging, and rollout of services to support reliable delivery of applications
- Implemented and maintained CI/CD pipelines using GitLab and Argo CD to automate build, test, and deployment workflows and streamline release processes
- Developed automation workflows with Ansible to standardize configuration management and environment provisioning across development and production platforms
- Performed troubleshooting and root cause analysis in complex network solutions to improve overall system stability, reliability, and operational continuity
- Automated testing for the platform with Python, Appium, and Selenium, integrating Allure reporting to enhance visibility into test results and platform availability

SWISSCOM

Full Stack Engineer

09/2023 – 09/2024 | Bern, Switzerland

- Developed backend services in Go (Golang) to support core application functionality and business logic
- Implemented frontend features using TypeScript to build and enhance user-facing components
- Designed and maintained Jira schemas to align workflows, issue types, and fields with development processes
- Configured and maintained CI/CD pipelines using GitLab and Jenkins to automate build, test, and deployment workflows
- Collaborated across backend and frontend codebases to ensure consistent integration between APIs and UI components
- Participated in troubleshooting and resolving issues across the stack, from Jira workflows to CI/CD pipelines and application code
- Collaborated with the AWS cloud team for migrating applications to AWS

ODYSSEY ROBOTICS

Full Stack Engineer

06/2021 – 07/2023 | Elche, Spain

- Developed backend services using Python and Node.js, focusing on robust API design and integration
- Built and maintained frontend applications with Flutter and Dart for cross-platform compatibility

SKILLS

Languages

Python, Go, TypeScript, Bash, Dart

Cloud & Infrastructure

AWS, Kubernetes, Docker, containerd, Terraform, Ansible

CI/CD & Automation

GitLab CI/CD, Jenkins, ArgoCD

Observability

Prometheus, Grafana

Databases

MongoDB, SQL

Networking

TCP/IP, DNS, SSH, HTTP/HTTPS, TLS

Operating Systems

Linux Administration, Shell Scripting

Machine Learning

Computer Vision, YOLO, OpenCV

- Designed front-end architecture for various cross-platform projects to ensure scalability and maintainability
- Led the front-end development team, coordinating tasks and ensuring alignment with project requirements
- Delivered mobile applications for Android and iOS platforms using cross-platform technologies
- Implemented small backend servers integrating Celery and MongoDB for asynchronous processing and data storage
- Containerized CUDA-based components using Docker and containerd to streamline deployment workflows
- Applied machine learning vision techniques with YOLO for computer vision features and services
- Participated in CI/CD deployment pipelines with GitLab to automate build, test, and release processes
